

The Cardiac Anesthesia Division is actively recruiting to support a growing program. Comprising 8 members, the team provides comprehensive care including pre-operative consultation, anesthesia for cardiac surgery, and post-operative management in the 6-bed Cardiac Surgery ICU, which can expand to 8 beds. With an annual volume of 600 cases, and plans to increase significantly due to rising patient demand, the division is poised for growth.

The scope covers the entire spectrum of cardiac surgery, excluding minimally invasive procedures and transplant. We also provide short term mechanical support (V-A ECMO, V-V ECMO, VAD). Additionally, the division supports the TAVI program with an annual volume of 150 cases. We also provide consultation and TEE support to our general anesthesia colleagues for patients have complex non-cardiac surgery.

When fully staffed, we aim for a 50/50 split between cardiac anesthesia and general anesthesia. In addition to appointment to the Dept. of Anesthesia, members of the Cardiac Anesthesia Division receive an adjunct appointment to the Dept. of Cardiac Sciences.
